

Client-Side Development

Coursework Two Specification

Submission Date: Noon, 13/08/2026

60% of Module Mark

Remember plagiarism is a serious offence – ensure that you use your own words even when referencing a source. Also reference libraries, tutorials or code that you used.

By submitting CW, you are declaring the following:

“I declare that this is all my own work. Any material I have referred to has been accurately referenced and any contribution of Artificial Intelligence technology has been fully acknowledged. I have read the University’s policy on academic misconduct and understand the different forms of academic misconduct. If it is shown that material has been falsified, plagiarised, or I have otherwise attempted to obtain an unfair advantage for myself or others, I understand that I may face sanctions in accordance with the policies and procedures of the University. A mark of zero may be awarded and the reason for that mark will be recorded on my file.”

More information and guidance about academic misconduct and plagiarism can be found in the following University Sites:

- [Academic Misconduct | Student Guide](#)
- [Student Academic Misconduct Procedure – Taught Courses, Short-Cycle, and Master of Research](#)

Learning Outcomes:

- Use relevant interactivity to guide users of a web page
- Employ usability, accessibility and user experience guidelines that solve an authentic problem
- Express concepts effectively in visual and written forms

Project Overview & Task

You are required to work in **groups of 3 or 4** to develop a contemporary, accessible, and multi-page website. The core purpose of the website is to act as a showcase for a business, service, or non-profit organisation of your group's choosing.

A central requirement of the site is a **functional Web Form** that captures and validates user contact and other relevant details (e.g., booking requests, membership sign-ups, or product inquiries).

Your website must demonstrate a synthesis of the key concepts covered in the module, including:

- Semantic HTML

- CSS (Flexbox/Grid, Transitions/Animations)
- JavaScript & jQuery
- Dynamic event handling
- Form validation
- Client-side data storage (localStorage or sessionStorage)

You are encouraged to be creative in your choice of theme but must ensure that the core technical requirements are met.

Submission guidelines

Group Submission:

Your group must submit a **single ZIP file** containing the entire project directory via the submission link on Blackboard. This ZIP file must include:

1. All HTML, CSS, JavaScript, and image files.
2. A README.md file outlining the project theme, individual roles, and a link to your shared Git repository.
3. All code must be fully functional and ready to run in a standard web browser.

Individual Submission:

Each student is required to submit the following **individually** via separate submission links:

1. **A PDF Report:** A report of approximately **1200 words** detailing the design and implementation of the project. The report should emphasize **your individual contributions**, outlining the specific modules/features you developed and the challenges you overcame.
2. **Peer Assessment Form:** A completed peer assessment form (provided on Blackboard) evaluating the contributions of each group member.

Important Note on Individual Contribution:

Your individual mark will be based on the group project mark, scaled to reflect your individual contribution as evidenced by your Git history, report, and peer assessments. A student who makes little to no contribution (less than 20%) may be awarded a mark of zero.

Note:

a) Penalties for exceeding the assessment limits

Where submitted work exceeds the agreed assessment limit, a margin of up to +10% of the work limit will be allowed without any penalty of mark deduction.

If the work submitted is significantly in excess of the specified limit (+10%), there is no expectation that staff will assess the piece beyond the limit or provide feedback on work beyond this point. Markers will indicate the point at which the limit is reached and where they have stopped marking.

A mark will be awarded only for the content submitted up to this point. No additional deduction or penalty will be applied to the overall mark awarded. The student is self-penalising as work will not be considered/marked.

Disciplinary procedures due to Academic Misconduct may be invoked if the word count/workload has been deliberately and significantly falsified.

b) Individual contributions

Students should make use of version control software (e.g. Git) in order to keep track of individual contributions to the assessment. An electronic self and peer assessment should be completed and submitted to the Blackboard online system after the submission of the assignment.

Team Work Logistics

Group Allocation: Groups will be formed by the Module Coordinator via random selection using a standard spreadsheet algorithm. Support will be provided to students to enhance their experience in forming the group, communicating, building group relationships and operating the groups using collaborative tools. Contingency plans for dysfunctional groups will also be included.

Over the course of the assignment, individual members of the group will submit self and peer assessment surveys indicating the perceived contribution of each group member. These surveys, together with attendance and engagement information, observation of group dynamics, etc, will be used to determine the peer contribution mark for each student. Individual contribution to the group work shall be more than 20%. A detailed rubric of how marks will be assessed will be provided.

Normally, the mark awarded to an individual will be the group and individual mark plus the peer contribution mark. An individual may be awarded a mark of zero where there is evidence that they made little or no contribution to the group. Students who have made some contribution, but significantly less than others in the group, may be awarded a reduced mark.

The scaling will happen according to the following example of the scheme: Consider a pair group submitting a piece of work that is deemed worthy of a mark of 50%. Consider also that one of the pair has declared their contribution to be 60% and the other declared at 40% (i.e. 10/50 or 20% less effort than an equitable contribution). The person whose contribution is the lesser will have their mark reduced by 10/50 or 20%, i.e. to 40% in this example. The person whose contribution was set at 60% will receive the full awarded mark of 50%.

Feedback

Assessment will take place off-line. Feedback will be provided via Blackboard on 11 September 2026 in compliance with university guidance.

Assessment Criteria (Individual component mark 30% + Group component mark of 70%)

Individual Component Mark 30%						
Criteria	0-39% fail	40-49% 3rd	50-59% 2.2	60-69% 2.1	70-79% 1st	80-100% High 1st
Individual contribution to the development of the project via report (15%)	Poor individual contribution. Poor report. Lack of understanding and discussion on final solution.	Limited individual contribution. Little detail completed in the report with limited presentation of the necessary information, making it unclear on what was developed.	Satisfactory individual contribution. Partly completed report with a degree of relevant detail presented. Attention to detail on areas, such as validation could be improved.	Good individual contribution. Details included for the majority of the features created, but more detail could have been included.	Very good individual contribution. Clear view in report of the features attempted.	Excellent individual contribution. Very Clear view in report of all features attempted, along with Validation reports showing how the brief was completely address ed.
Individual contribution to the Implementation of the solution (15%)	The solution was poorly implemented and documented. No/Little effort has been made in following good practice in the designing and writing code.	The solution was limited implemented and documented. No/Little effort has been made in following good practice in the designing and writing code.	The solution was reasonably well implemented and documented. Satisfactory effort has been made in following good practice in the designing and writing code.	The solution was well implemented and documented. Good effort has been made in following good practice in the designing and writing code.	The solution was very well implemented and documented. Very Good effort has been made in following good practice in the designing and writing code.	The solution was excellently implemented and documented. Excellent effort has been made in following good practice in the designing and writing code.
Total	30%					

Group Component Mark 70%						
Criteria	0-39% fail	40-49% 3rd	50-59% 2.2	60-69% 2.1	70-79% 1st	80-100% High 1st
Separation of concerns physically in the file structure and logically in the separation of the HTML, CSS and code (5%)	Little evidence of organisation of files or logically in the HTML.	One additional folder included.	Attempt to locate in folders.	Partially organised into folders physically, but could be better separated in the HTML.	Mostly organised into folders with consideration to the folder names and contents.	Fully separated physically and logically for the HTML from CSS and jQuery.
Background image and favicon used cross all web pages (5%)	Neither included.	One Included, but not stored in a suitably named folder.	Not stored in images folder, but appropriate dimensions and file size for background image.	Stored in images folder, but unclear if the file size has been compressed.	Stored in images folder and of the appropriate dimensions and file size.	Stored in images folder and of the appropriate dimensions and file size and favicon catered for.
CSS and linking to the HTML (Using classes, ids selecting appropriate naming) on the image /map web page (15%)	Little or no attempt to include external style tags (Relying heavily on browser default CSS or inline attributes used).	Limited CSS created and includes duplicates or obvious errors.	CSS created with no duplicates or obvious errors.	Reasonable set of CSS created, but not stored in an external file or naming of styles is misleading as to their expected styling.	Linked External CSS that shows an image background and information is displayed with user-specified style and has a layout that is user friendly.	Linked External CSS with appropriate cascade and naming that shows an image background with effects (example: transitions) and information is displayed with user-specified style.

Javascript and jQuery to control display of information on the information web page (20%)	No user interaction to reveal data on a user click by click basis.	Minimal attempt included to reveal the information after each user click.	Clear attempt included to reveal the information after each user click.	Animation included to reveal all the information after one user click.	User friendly use of animation to reveal the information after each user click.	Excellent use of animation in a memorable way to reveal the information after each user interaction.
Javascript and jQuery to validate user input on the Web Form page (15%)	No inclusion of code to allow interaction.	No collection of user data or ability to enter new user input for display at the end of the existing information.	Limited attempt at collection of user data to enter new user input, but errors remain unresolved.	Good attempt at the collection of user input, but errors remain unresolved.	Collection of user input with the addition of the entered information in the updated DOM.	Collection of user input and validation of the entered information in the updated DOM and reflected seamlessly on the web page.
Accessibility of Web Form (10%)	Not obvious it has been attempted.	Little clear evidence this has been attempted.	Some consideration of accessibility included.	Consideration for a wider audience than just the developer.	Good effort in accommodating a diverse set of users.	Excellent attempt to add this for a diverse set of users.
